

Kyeto Fleet Management (KFM) – Full Company & Division Overview

1. Company Overview

Kyeto Fleet Management (KFM) is a strategic division under Kyeto Logistics Group (KLG), designed to provide end-to-end fleet management and telematics solutions across commercial, industrial, and governmental sectors. Building on Kyeto's existing logistics expertise in the Democratic Republic of Congo and frontier African markets, KFM offers state-of-the-art GPS tracking, telematics, driver safety monitoring, fuel management, and asset control to maximize fleet efficiency, safety, and cost optimization.

KFM positions itself as the digital backbone for vehicle and logistics operations, blending SaaS, hardware, and analytics into an integrated, subscription-based model that ensures recurring revenue and deep market penetration.

2. Division Purpose & Mission

The purpose of KFM is to:

- Transform fleet operations into transparent, efficient, and accountable systems.
- Provide real-time operational visibility to fleet owners, drivers, importers, and government agencies.
- Enable predictive and preventative maintenance, reducing downtime and cost.
- Deliver data-driven insights that optimize routes, fuel consumption, and driver performance.
- Offer scalable solutions for SMEs, large logistics operators, and public/private sector fleets.

Mission Statement:

“To empower fleet operators with intelligent telematics and digital management tools, creating safer, more efficient, and fully transparent transportation networks across frontier markets.”

3. Core Services & Offerings

A. GPS Tracking & Telematics

- Real-time vehicle location tracking (2–5 second updates).
- Route monitoring, geofencing, and automated alerts.
- Driver ID and activity logs.
- Historical trip analytics for performance and efficiency reviews.
- Integration with ERP, TMS, and insurance platforms.

B. Fuel Management

- Real-time fuel level monitoring via CANbus or fuel sensors.
- Detection of fuel theft or anomalies (drop events, siphoning).
- Fuel consumption analytics, idle vs. motion burn reports.
- Alerts and recommendations for fuel-efficient operations.

C. Driver Behavior Monitoring

- Harsh acceleration, braking, and cornering alerts.
- Driver scorecards and performance analytics.
- Real-time driver coaching and notifications.
- Incentive programs for high-performing drivers.

D. AI-Powered Safety & Cameras

- Dual-facing AI dashcams for cabin and cargo monitoring.

- Detection of fatigue, distraction, phone usage, and seatbelt violations.
- Event recording, live streaming, and cloud storage for up to 90 days.
- Insurance-ready incident documentation.

E. Maintenance & Diagnostics

- Engine health monitoring and predictive alerts.
- Scheduled maintenance notifications.
- Diagnostic trouble code (DTC) monitoring and reporting.
- Early detection of vehicle malfunctions to reduce downtime.

F. Asset & Trailer Management

- Tracking for trailers, containers, and non-powered assets.
- Unauthorized movement alerts and geofencing.
- Long-life battery solutions (6–36 months).
- Reports on asset utilization and ROI optimization.

G. Workforce Optimization

- Task assignment, driver scheduling, and route planning.
- Mobile updates and notifications to drivers.
- Performance tracking and reporting dashboards.

H. Risk Management & Compliance

- 24/7 stolen vehicle recovery services.
- Compliance tracking (transport regulations, tax, ESG reporting).

- Digital audit trails for government and corporate accountability.
-

4. Technology Stack

- Hardware: Teltonika (FMB920, FMB125, FMB140), Queclink (GV20, GV300, GL300, TAT100), AI cameras (SmartWitness, Lytx, Samsara).
 - Connectivity: 2G/3G/4G LTE with global SIMs; satellite optional for remote areas.
 - Cloud Platform: SaaS dashboard for web, iOS, and Android.
 - Data Analytics: Kyeto Fuel AI, driver behavior scoring, predictive maintenance.
 - API Integration: ERP, TMS, insurance, government reporting tools.
-

5. Integration with Kyeto Logistics Group (KLG)

KFM is fully aligned with KLG's port-to-city dispatch and marketplace operations, enhancing operational visibility and coordination:

- KFM trackers feed real-time GPS data to the KLG Dispatch Platform.
 - Route planning and driver assignment integrate with KLG's digital marketplace.
 - Data analytics from KFM improves job allocation, fleet utilization, and ETA accuracy.
 - Supports KLG's mission of transparent, secure, and efficient transport logistics.
-

6. Revenue Model

- Subscription-based services (per vehicle/asset per month).
- Hardware sales (OBD, CANbus devices, AI cameras, fuel sensors).

- Bundled packages (GPS + fuel + driver behavior + AI safety).
 - Recurring revenues through maintenance, compliance, and SaaS modules.
 - Upsell potential for large fleets, governments, and corporate contracts.
-

7. Strategic Value

- Provides consistent revenue streams independent of core logistics operations.
 - Creates sticky relationships with clients through subscription-based services.
 - Builds data intelligence across fleets, supporting predictive business decisions.
 - Enables market expansion into new regions with proven telematics solutions.
 - Offers first-mover advantage in DRC and frontier markets, positioning KFM as the dominant fleet management player.
-

8. Target Clients

- Small to Medium Enterprises (SMEs) – trucks, delivery fleets, service vehicles.
 - Large Logistics & Mining Companies – multi-city fleets, high-value assets.
 - Government & Public Sector – buses, public transport, port authorities.
 - Specialized Cargo Operators – fuel, oil & gas, mining fleets, high-risk transport.
-

9. Competitive Benchmark

- Inspired by global leaders like Cartrack (\$2B valuation, 24 countries), Samsara, and Geotab.

- Focused on frontier market adaptation: rugged devices, offline data, satellite fallback, multilingual dashboards.
 - Unique integration with KLG's national dispatch and marketplace platform gives a logistics-first advantage.
-

10. One-Line Executive Summary

“KFM is Kyeto Logistics Group’s fleet management division, offering GPS tracking, fuel monitoring, AI safety, and data-driven fleet intelligence to optimize vehicle operations across Congo and frontier African markets.”
